

Visu-Loc Multi-Fire Clip Applier

Visu-Loc

Visu-Loc delivers a Spring Clip through a 5mm port, providing

continuous ligation force. Unlike Crush Clip appliers, the jaws can be used to grasp tissue without deploying a clip.

Visu-Loc is available in two different lengths to facilitate both laparoscopic and open procedures.

Visu-Loc Curved

Visu-Loc Curved facilitates laparoscopic surgeries performed through a single incision. The curve enables reaching targeted vessels and helps to avoid "sword fighting".

Visu-Loc Spring Clip

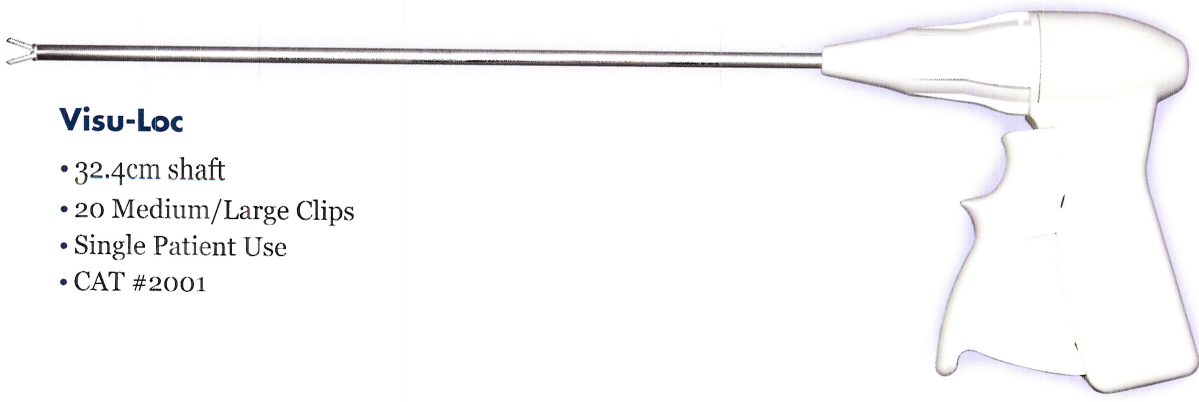

Visu-Loc Spring Clip is a titanium biased closed clip, therefore, constant force causes the clip to continuously ligate, providing superior clip security.

Visu-Loc Spring Clip is 13% longer than standard medium/large clips, allowing for ligation of larger vessels. The unique clip design permits delivery of the same clip through Visu-Loc, Visu-Loc Curved and Visu-Loc Short.
