CONFIDENCE YOU CAN FEEL
Confidence. That’s what the WECK Hem-o-lok polymer locking ligation system provides. Confidence created by a ligation system designed for clip security—secure in the applier, locked on to the patient vessel.

SECURITY BY DESIGN
Hem-o-lok’s unique design and flexible hinge keep the clip firmly seated in applier jaws. The clip’s distinct tactile feedback confirms jaw seating and secure vessel placement.

COOL LIGATION
Since Hem-o-lok is a cool ligation system, there’s no chance of thermal spread to vital structures, a common concern of many surgeons when they use energy-based ligation solutions.

SIZE RANGES TO MEET YOUR NEEDS
Hem-o-lok is available in a range of clip sizes (Medium, Medium/Large, Large, and XL) to ligate up to 10 mm vessels through a 5 mm port or up to 16 mm vessels through a 10 mm port. Our broad range of applier lengths (including 45 cm endo appliers for extended reach) allows surgeons to deliver clips with control and confidence.

AT A GLANCE
- Provides secure ligation, clip locks on to vessels
- Tactile feedback
- Permanent, non-absorbable, inert, non-toxic, radiolucent polymer
- Cool ligation system
- Open or laparoscopic appliers
VESSLE/TISSUE BUNDLE SIZE RANGE

STERILITY STORAGE TRAY
- 544500 capacity: 3 endoscopic 32cm appliers
- P37319 capacity: 2-3 endoscopic 45cm appliers

HEM-O-LOK BEHIND THE CLIP

1. Bosses are designed to retain clip in applier jaws
2. Integrated teeth interface with the vessel and are designed to prevent slippage
3. Locking mechanism provides tactile feedback and secure closure
4. Bow-shape allows removal with appropriate instrument
5. Hinge allows flexibility in clip placement prior to clip locking
6. Non-Absorbable polymer is inert, non-conductive, radiolucent, and does not interfere with CT, MRI, or X-ray diagnostics
